NETFLIX

Netflix Customer & Content Analytics

Business Case Study

A practical Data Analyst portfolio project

BUSINESS ANALYTICS • SQL + BIGQUERY + EXCEL

Business Problem

Netflix management wants to understand whether subscriber growth is translating into sustainable revenue and retention, and which customers, subscription plans and content are driving engagement.

Analyst Objective

As a Data Analyst, analyze customer, subscription, content and viewing data to uncover actionable insights and recommendations that can improve **subscriber growth, revenue, retention, engagement and content strategy**.

Project Flow

Raw Data → SQL Cleaning → KPI Analysis → Excel Dashboard → Business Recommendations

01 Subscription & Revenue Analysis

- What is the monthly subscriber growth trend?
- What is the Monthly Recurring Revenue (MRR)?
- Which subscription plan generates the highest revenue?
- Which plan has the highest number of subscribers?
- What is the Average Revenue Per User (ARPU)?

02 Customer Analysis

- How many unique customers are there?
- What is the customer distribution by age group?
- Which gender has the highest number of customers?
- Which countries have the largest customer base?
- Which acquisition channel brings the most customers?

03 Content & Genre Analysis

- Which genre receives the most views?
- Which genre generates the highest watch hours?
- Which genre has the highest average customer rating?
- What are the top titles by watch hours?
- Are Movies or Series more engaging?

04 Customer Engagement Analysis

- What is the total watch time?
- What is the average watch time per customer?
- Which device generates the highest engagement?
- Which age group watches the most?
- Which customer segments are highly engaged?

05 Rating Analysis

- What is the average content rating?
- Which genres have the highest ratings?
- Which titles have the highest ratings?
- Do highly rated titles receive more views?
- Which customer segments give higher ratings?

06 Recommendation Analysis

- How many customers were shown recommendations?
- How many recommendations were clicked?
- What is the Recommendation Click-Through Rate (CTR)?
- Which customer segments click recommendations most?
- Does clicking a recommendation lead to higher engagement?

07 Payment & Subscription Health

- What is the payment success rate?
- What is the payment failure rate?
- Which plan has the highest payment failure rate?
- How much revenue is affected by failed payments?
- What percentage of subscriptions are cancelled?

08 Monthly Business Trends

- How many new customers joined each month?
- How many customers churned each month?
- What is the monthly retention rate?
- How does watch time change each month?
- Is overall business performance improving or declining?

09 Churn & Retention Analysis

- How many customers have churned?
- What is the overall churn rate?
- What is the monthly churn trend?
- Which subscription plan has the highest churn?
- Which customer cohorts have the best retention?

Final Dashboard KPIs

KPI	Purpose
Active Subscribers	Current subscriber base
New Subscribers	Acquisition growth
MRR	Monthly recurring revenue
ARPU	Revenue per customer
Churn Rate	Customer loss
Retention Rate	Customer loyalty
Watch Hours	Engagement
Completion Rate	Content consumption
Average Rating	Customer satisfaction
Recommendation CTR	Recommendation effectiveness

Final Deliverable

SQL / BigQuery: Clean, standardize, deduplicate, join the four tables and calculate the business KPIs.

Excel: Build an executive dashboard with KPIs, monthly trends, churn/retention, customer segments and content performance.

Business Recommendation: Finish with 3–5 actions supported by the analysis.

Portfolio note: This is a synthetic Netflix-style case study. Results should not be presented as Netflix's actual internal performance.
